O2O ACADEMY 54

“Our aim is to change the *status quo* of endodontics, and the way to do it is to create innovative, well-designed, simple and easy-to-use products and systems.”

Zarc was born in January 2021 with the aim to universalize endodontics of the highest quality.

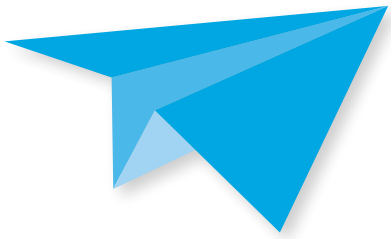
Our purpose is not to sell endodontic products, but to excite, inspire and generate new ways of doing things.

After a lengthy process in which research and experience in clinical practice worked hand in hand, **Zarc** has succeeded in developing **innovative products** capable of meeting the **needs of the best professionals**.

Guided by the philosophy of **O2O**, from odontologists to odontologists, the group of Spanish dentists designed BlueShaper®, the instrumentation system that launched the **6th generation of NiTi instruments**. It is the first rotary file system on the market with 2 alloys, pink + blue, which facilitate simple and extremely efficient instrumentation.

Zarc has the support of more than **160 opinion leaders** who are in charge of continuous training and dissemination of the latest trends in the field of endodontics, one of the company's great commitments. To date, the **Zarc** team has already taught **more than 500 courses** at universities and training centres, and our products have been tested in more than **2,000 clinical cases**.

Currently, the company is present at **numerous international congresses and events**, and its innovative products for endodontics have already won over professionals worldwide.

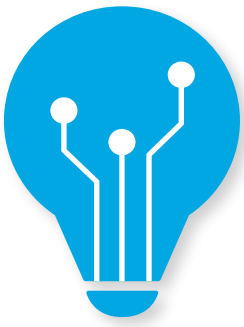


Mission

To universalize endodontics, promoting accessibility to a safe, simple, predictable and quality environment for professionals to carry out their work.

Vision

To become the leading brand of reference worldwide in endodontics, with products designed by and for dentists in a collaborative environment.



Values

Leadership in innovation.
Quality in our products.
Excellence in our processes.
Personalized attention.
Integrity and transparency.
Collaborative culture.

Innovation

Zarc has innovation in its DNA. For this reason, since its inception, it has built its foundation on the revolutionary ideas of a group of Spanish endodontists and currently collaborates with leading Research, Development and Innovation (R&D&I) groups around the world.

Corporate Social Responsibility

We strive to ensure a positive and sustainable impact on our community and planet, with the highest level of respect for endodontics, dentistry, people, their ways of life, and the world in which we inhabit.

1. TREATMENT

ZApex®

Next-generation
apex locator

SMALL AND POWERFUL

Z-APEX® IS ONE OF THE SMALLEST AND LIGHTEST LOCATORS ON THE MARKET.

- Colour LCD display for easy viewing.
- Wireless charging by simply placing the locator on the charging base.
- Cordless device.
- Small size and low weight for a more comfortable use.

Includes everything needed to perform reliable and accurate root canal measurements:

- Charging Base
- Apex Locator
- Lip Hook
- Bifurcated Probe
- File Clip
- Cord for Lip Hook
- Adapter
- Verifier
- Clip

Z-Activator®

A unique experience
in root canal activation

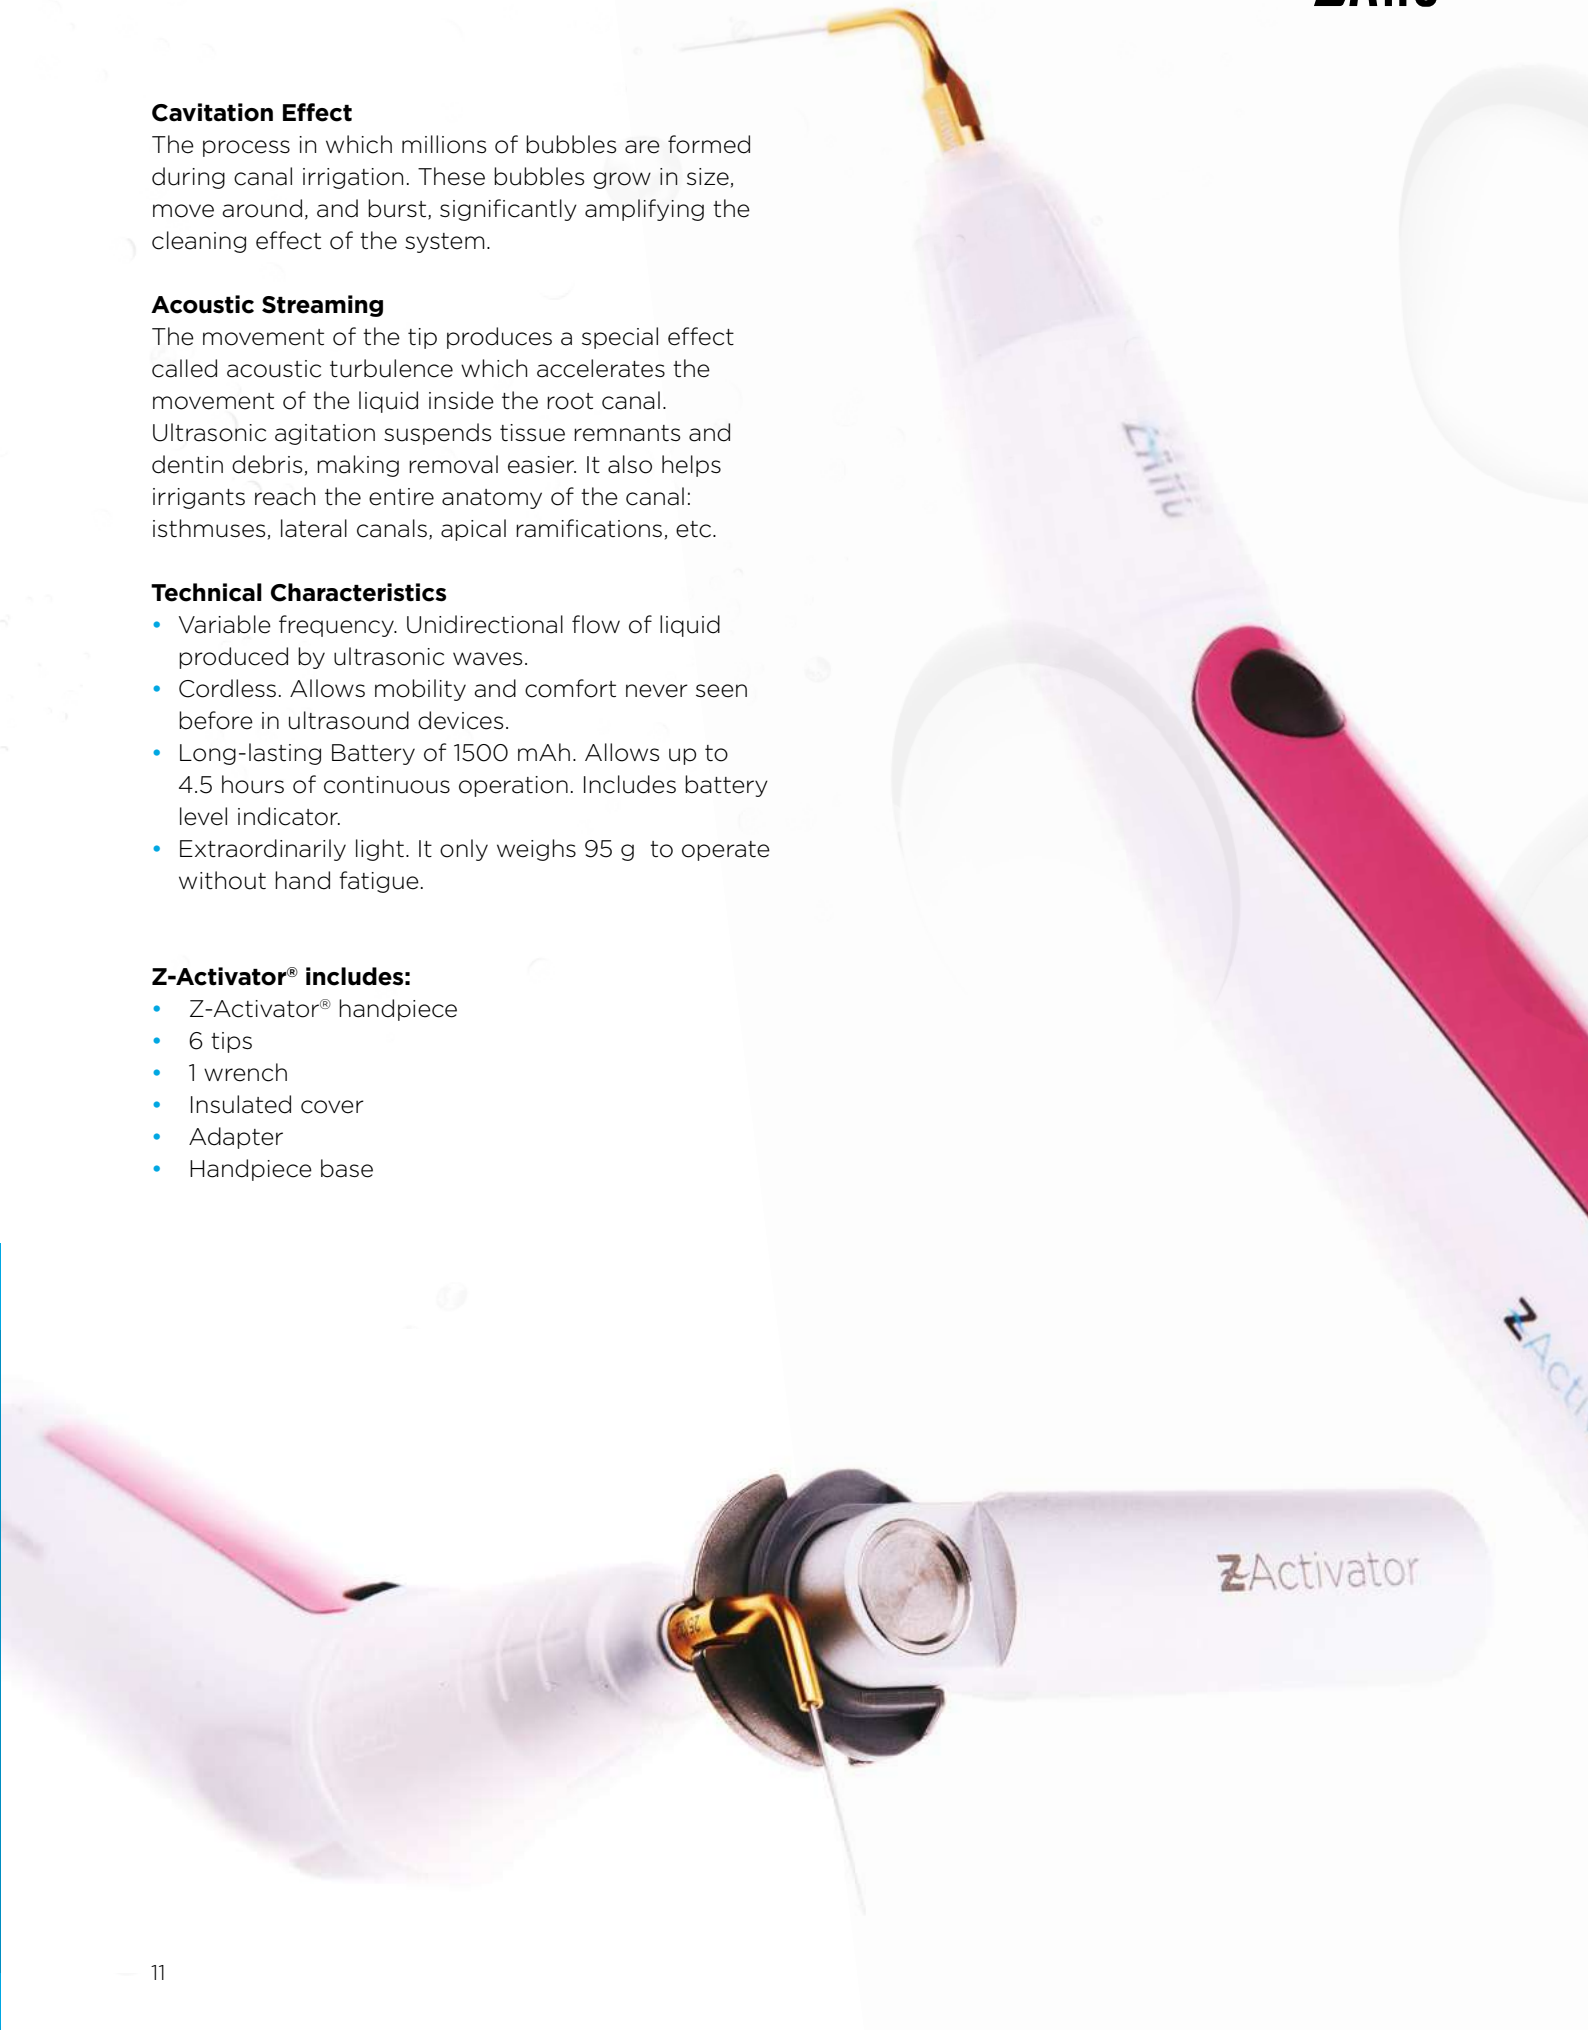
Z-ACTIVATOR®
IS THE HIGHEST
POWERED CORDLESS
ULTRASONIC
ACTIVATOR ON
THE MARKET

Cavitation Effect
The process in which millions of bubbles are formed during canal irrigation. These bubbles grow in size, move around, and burst, significantly amplifying the cleaning effect of the system.

Acoustic Streaming
The movement of the tip produces a special effect called acoustic turbulence which accelerates the movement of the liquid inside the root canal. Ultrasonic agitation suspends tissue remnants and dentin debris, making removal easier. It also helps irrigants reach the entire anatomy of the canal: isthmuses, lateral canals, apical ramifications, etc.

Technical Characteristics
- Variable frequency. Unidirectional flow of liquid produced by ultrasonic waves.
- Cordless. Allows mobility and comfort never seen before in ultrasound devices.
- Long-lasting Battery of 1500 mAh. Allows up to 4.5 hours of continuous operation. Includes battery level indicator.
- Extraordinarily light. It only weighs 95 g to operate without hand fatigue.

Z-Activator® includes:
- Z-Activator® handpiece
- 6 tips
- 1 wrench
- Insulated cover
- Adapter
- Handpiece base



ZEvo®

Endodontic motor with continuous and reciprocating rotation and integrated apex locator

ENDODONTICS MADE EVEN EASIER

THE ENDODONTIC MOTOR THAT ALLOWS ABSOLUTE APICAL CONTROL

Technical characteristics:

- Miniature head, one-piece 1:1 contra-angle.
- 360º adjustable head.
- Brushless motor. It is reliable, efficient, and has a longer service life.
- Applied torque control.
- Reverse movement in apical portion.
- Reduced speed in apical portion. The speed slows when the file approaches this region.
- Updated with the latest version of software.
- OLED digital display.
- Ambidextrous screen.
- Heavy duty 1500 mAh lithium battery.
- Automatic start and stop.

Technical specifications

Speed Range	120 - 1000 rpm
Torque Range	0.5 - 4.0 N•cm
Number of memories	11 (M0 - M10)
Battery Power	1500 mAh

The **apex locator** can be integrated with the motor function or used independently. The screen indicates the file approaching and has an acoustic alert signal. It uses multi-frequency technology to achieve high precision.

Z-Evo® includes:

- Charging base
- Z-Evo® handpiece
- Contra-angle
- Protective case
- File clip (2 units)
- Lip clip (2 units)
- Measuring wire
- Adapter
- Mouthpiece

ZEvo mini®

Endodontic motor
with continuous and
reciprocating rotation

MAXIMUM POWER
IN AN EVEN
SMALLER DEVICE

Zarc Z-Evo mini® endodontic motor, **with continuous and reciprocating rotation**, has everything needed for root canal treatments. Its reduced-size design allows for **a more comfortable experience**, allowing the endodontist to work with the most mobility possible.

- OLED screen for torque calibration. Adaptable for use with either right or left hands.
- 360º adjustable head to reach any canal. Facilitates access and visibility.
- The motor can perform rotary or reciprocating movements and adapts to any file system on the market.
- Long-lasting battery. It has a long-lasting 800 mAh lithium battery to allow completely autonomous operation.
- Extraordinarily light. The device weighs only 99 g, which helps reduce hand fatigue during treatment.

Z-Evo mini® includes:

- Z-Evo mini® handpiece
- Contra-angle

Technical specifications

Speed Range	120 - 650 rpm
Torque Range	0.5 - 4.0 N•cm
Number of memories	10 (M0 - M9)
Battery Power	800 mAh

2.INSTRUMENTATION

Pink + Blue

Two alloys in one system

BlueShaper® files are available in blister packs of 6 units in 21, 25 and 31 mm lengths. It is also possible to purchase assorted blister packs of 4 files in 21, 25 and 31 mm.

JOSÉ CONDE

The BlueShaper® system provides us with **safety, versatility and efficiency**, for both simple and complex cases. And most importantly, it ensures **predictable and successful treatments** for our patients.

ARMAN GAZI

They are **flexible instruments** that allow us to treat **even the most complex of anatomies** completely safely.

CARLOS FRANCO

It is a flexible file system with **good cutting power** that allows for **safe and fast preparation** of root canals.

BlueShaper®

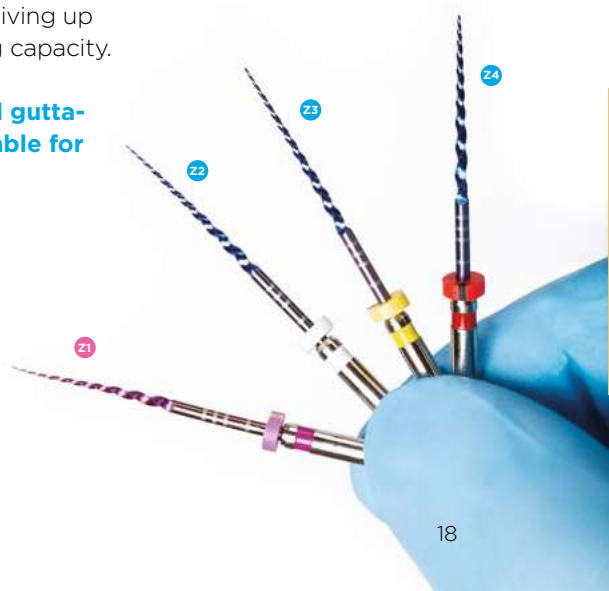
The first 6th generation NiTi file system

A REVOLUTION IN ENDODONTICS. DESIGNED BY SPANISH DENTISTS.

- The **pink alloy**, present in file Z1, gives it enough torsional resistance to advance in any canal, even in narrow or calcified canals.
- The **blue alloy**, present in the rest of the files, increases resistance to cyclic fatigue and flexibility, to respect the initial anatomy in canals with severe curvature.

This combination of files allows easy instrumentation of any type of canal. Thanks to their great flexibility, they adapt perfectly to tooth anatomy, respecting the dentin, without giving up extraordinary cutting capacity.

Exclusive paper and gutta-percha points available for BlueShaper®.



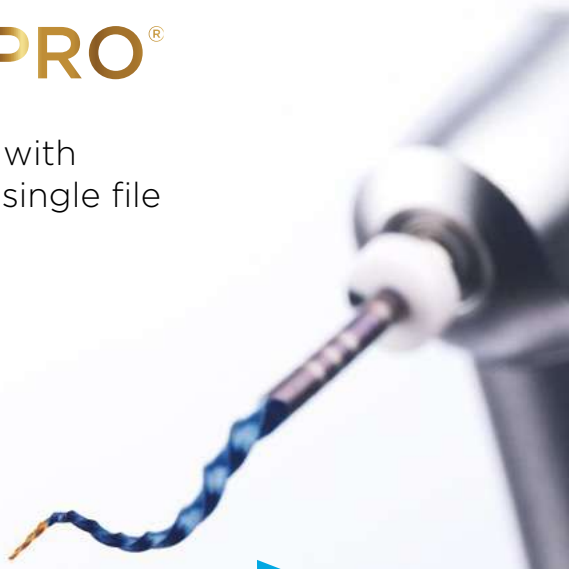
BlueShaper Pro® files are available in blister packs of 6 units in 21, 25 and 31 mm lengths. It is also possible to purchase assorted blister packs of 4 files in 21, 25 and 31 mm.

BlueShaper PRO®

First system in the world with two heat treatments in a single file

RAISES THE QUALITY OF ENDODONTIC TREATMENT WITH DUALWIRE® TECHNOLOGY

- The **DualWire® technology**, developed by Zarc, allows a **greater versatility** in the instrument, offering a cutting tip while maintaining the **same flexibility** as the classic BlueShaper®.
- Thanks to the **dual heat treatment** of the BlueShaper PRO®, it allows a more **precise and efficient** canal preparation. It features an enhanced cutting tip thanks to its **golden 3 mm**.
- It has been manufactured **with high-quality materials** and subjected to **rigorous manufacturing standards**.
- It offers **exceptional performance** due to its increased penetration capacity in the canals, improved resistance to torsional stress, and enhanced cutting efficiency, while maintaining the **high flexibility** of BlueShaper®.



DualWire®

Efficiency of the new alloy

Exclusive gutta-percha and paper points available for the BlueShaper Pro® line.

JOSÉ ARANGUREN
A much more versatile file, cutting, penetration, and flexibility in a single instrument.

ARMAN GAZI
Combining flexibility and cutting efficiency is an incredible necessity in our canal preparation. My treatments are now safer and easier thanks to DualWire®.

CARLOS FRANCO
With BlueShaper PRO® files, progression in the canal becomes faster and there is a greater sense of security regarding tip resistance.

Available in a 6-unit blister pack in lengths of 21, 25 and 31 mm. It is also possible to purchase two complete sequences in a 6-file assortment of 21, 25 and 31 mm.

SlimShaper®

THE FIRST MINIMALLY INVASIVE THREE-ALLOY SYSTEM ON THE MARKET

SlimShaper® is the first rotary file system that uses **three alloys**: Gold, Pink and Blue. These are **minimally invasive** files with **unprecedented flexibility** and variable taper. These files allow for a very fast canal preparation while maintaining the anatomy of the canal very close to the original. It is a simplified system of 3 files that makes treatment **fast, effective and very precise**.

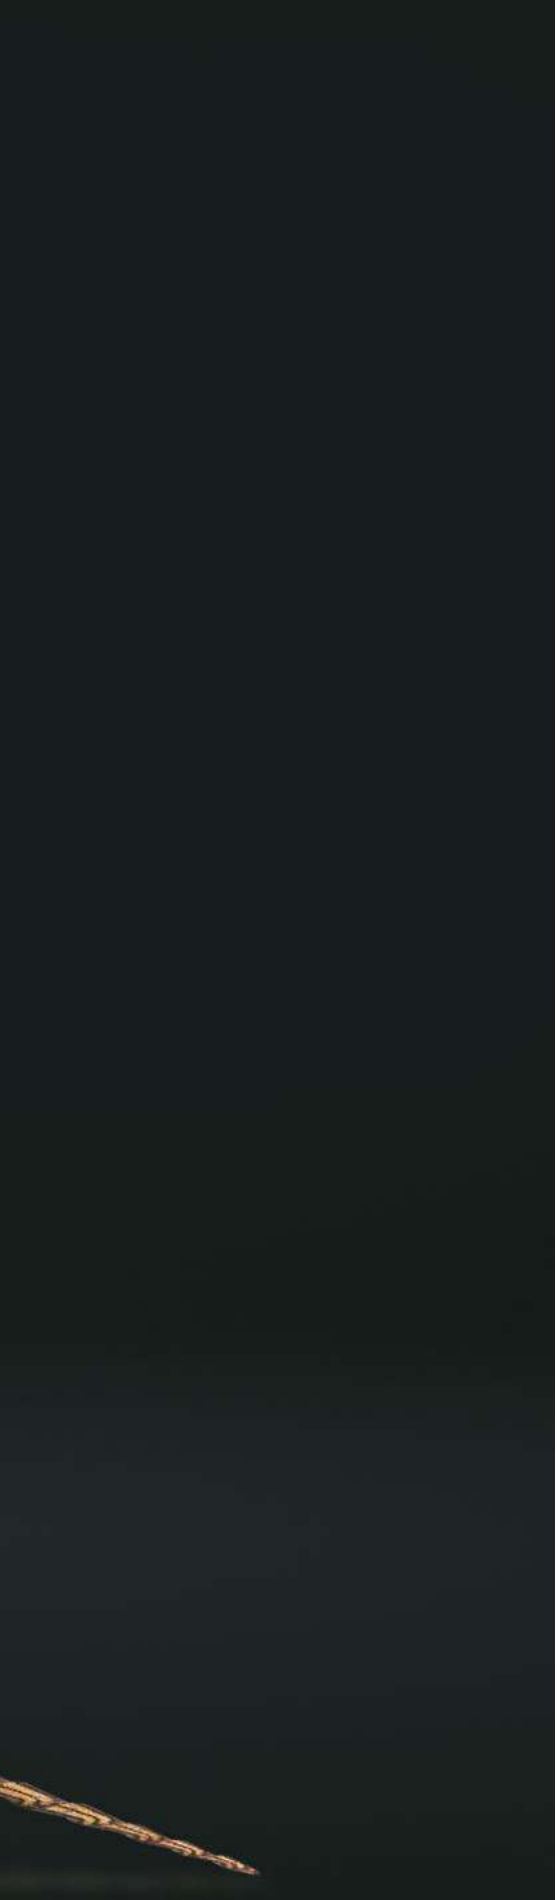
The files have been specially designed for **complex canals, sclerosed or with abrupt curvatures**. SlimShaper® is suitable for all types of anatomies.

The different coloured handles make it easy to quickly identify the alloy required for each stage of the treatment.

SlimShaper® is **fast, effective, ultra-flexible and conservative** for complex anatomies.

Exclusive paper and gutta-percha points available for SlimShaper®.

It is the fastest, simplest, most effective and most versatile system ever invented.



Available in blister of 6 units in lengths 21, 25 and 31 mm. It is also possible to purchase the sequence of 4 files in 21, 25 and 31 mm.

ZARC

excalibur®

Single-file system without shape memory

EFFECTIVENESS AND VERSATILITY

Excalibur® is a **state-of-the-art single-file reciprocating system that uses a gold alloy**. It is characterized by its **absence of shape memory**.

With a **taper of only 5%**, it is the first conservative **single-file** reciprocating system capable of removing less dentin than its competitors on the market.
The union of the new gold alloy without shape memory with the reduced taper make Excalibur® always the best option.
It is the fastest, simplest, most effective and most versatile system ever invented. It features a unique aesthetic with a black handle and a shiny gold-coloured file. **This new instrument is capable of doing it all, and doing it well**.

The Excalibur® Family has **4 instruments** to choose from, so specialists can select the one that the one that best suits their clinical needs. Available sizes: 20/05, 25/05, 35/05 and 45/05.

Exclusive paper and gutta-percha points available for Excalibur®.

Apica Shaper®

Available in blister of 6 units in lengths 21, 25 and 31 mm. It is also possible to purchase the sequence of 4 files in 21, 25 and 31 mm.

The safest and most precise finishing files

NEXT-GENERATION INSTRUMENTATION FOR APICAL SHAPING

ApicalShaper® files allow for a **proper preparation of the apical third** of the canal while preserving the rest thanks to its reduced taper of 3%. With this **innovative system**, the apical diameter can be enlarged while respecting the initial anatomy of the canal, **preserving the pericervical dentin as much as possible and avoiding weakening the root**.

It is used as a **finishing file**, supplementing any system on the market. With ApicalShaper®, the apical diameter can be enlarged up to 50, **respecting the dentin of the canal and allowing a greater volume of irrigant** to be brought to the apical third when necessary (necrosis, retreatment, etc.).

ApicalShaper® files have a **centered parallelogram**, have been designed with the **state-of-the-art blue alloy** and are available in apical diameters of 30, 35, 40 and 50, always with a 3% taper. Blue handle.

Exclusive paper and gutta-percha points available for ApicalShaper®.

Z-Glider®

The best path towards conservative instrumentation

THE ONLY ROTARY FILE IN ITS CATEGORY WITH PINK ALLOY

- Z-Glider® is designed to establish the glide path easily, reducing clinical stress. This way, it favours instrumentation to working length.
- The pink alloy gives it enough torsional resistance to advance in any canal.

Available in 3-unit blister packs
in working lengths of 21, 25 or 31 mm.

RetreatAll®

Effective retreatment

GUTTA-PERCHA REMOVAL FROM INSIDE THE CANAL WITH JUST TWO FILES

Zarc RetreatAll® files **remove more coronal and apical gutta-percha** thanks to their innovative design and continuous rotation movement. They are instruments with the right speed, length and section necessary to remove all kinds of materials from inside root canals.

Both files from the RetreatAll® sequence have similar characteristics: triangular cross-section, continuous rotation and a speed of 500 rpm. However, they differ in terms of gauge and working length in order to achieve an **optimal treatment outcome**.

- The ZR1 file has a 30 gauge, a taper of 6% and a working length of 21 mm. It allows for the removal of gutta-percha located in the coronal part.
- The ZR2 file has a 25 gauge, a taper of 6% and a length of 25 mm to allow for access to gutta-percha in the apical part.

Available in a 4-unit sterile blister pack. Each blister pack contains two ZR1 files and two ZR2 files.

KFile®

Resistant and easy-to-use manual files

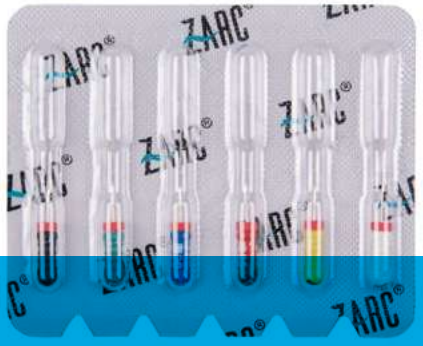
A CLASSIC, AS EFFECTIVE AS ALWAYS

Zarc K-File® manual files have been designed for root canal preparation and permeabilization. They have rounded handles made of SBS plastic, making them more resistant, comfortable and manageable, as well as extraordinarily safe and effective.

Technical characteristics:

- Made of highly compact stainless steel
- Taper of 2%
- The active part is 16 mm

Lengths	21, 25, 31 mm
Sizes	06-80 ISO



Available in 6-unit blister packs and also in assorted blister packs of 15-40 and 45-80.

KFlex®

Manual file with inactive tip and heavy-duty stopper

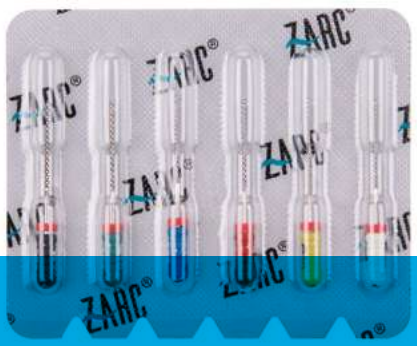
THE PERFECT BALANCE BETWEEN SAFETY AND EFFECTIVENESS

K-Flex® files are ideal for negotiating canals following the anatomy and avoiding any accidents. They have highly-visible heavy-duty red stoppers.

Technical characteristics:

- Made of highly compact. stainless steel.
- Taper of 2%.
- The active part is 16 mm.

Lengths	21, 25, 31 mm
Sizes	15-45 ISO



Available in 6-unit blister packs and also in assorted blister packs of 15-40.

HFile®

Hedstroem stainless steel hand file

EXTREMELY SAFE AND EFFECTIVE

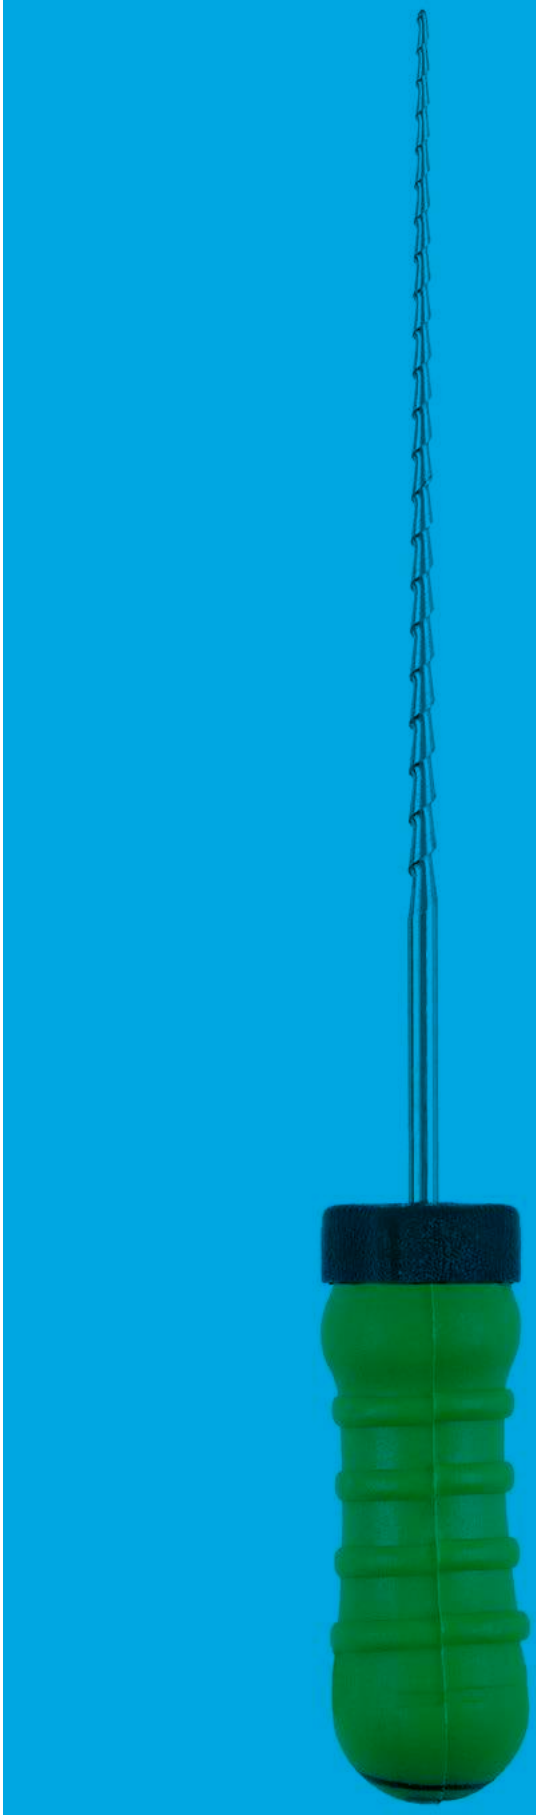
The **Zarc** H-File® files have been designed to remove gutta-percha or other obstructions from the root canal. Their rounded plastic SBS handle makes them more durable, comfortable, and manageable.

Technical characteristics:

- Made of highly compact stainless steel.
- Taper of 2%.
- The active part is 16 mm.

Lengths	21, 25, 31 mm
Sizes	15-80 ISO

They can be purchased in blister packs of 6 units and also in assorted blister packs of 15-40 and 45-80.



3. OBTURATION

Z-Condensor®

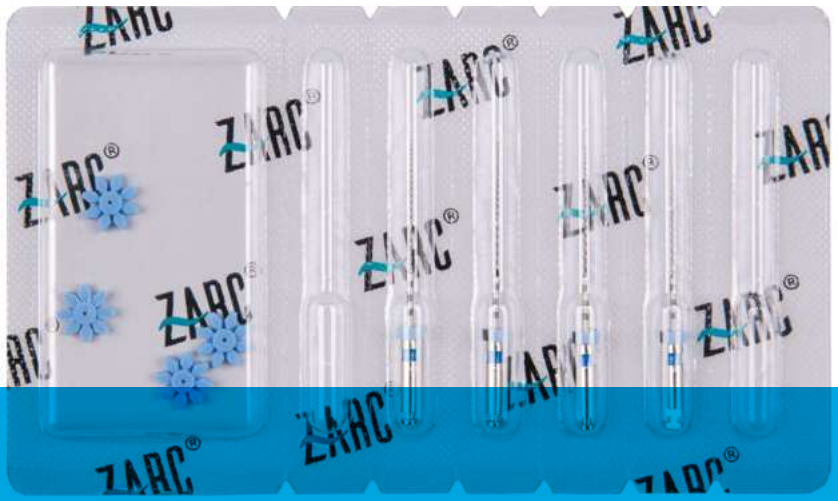
The most advanced thermocompaction instrument

ACHIEVE AN EFFECTIVE AND SIMPLE OBTURATION

The **simplest way** to perform gutta-percha thermocompaction. Allows the gutta-percha to be softened, achieving **a perfect fluidity** that adapts to all the sinuosities of the canal.

- Favours thermocompaction for an effective three-dimensional filling.
- Z-Condensor® is made of NiTi.
- The length marks allow for total control during treatment.

Length	21, 25 mm
Gauges	25-45 ISO

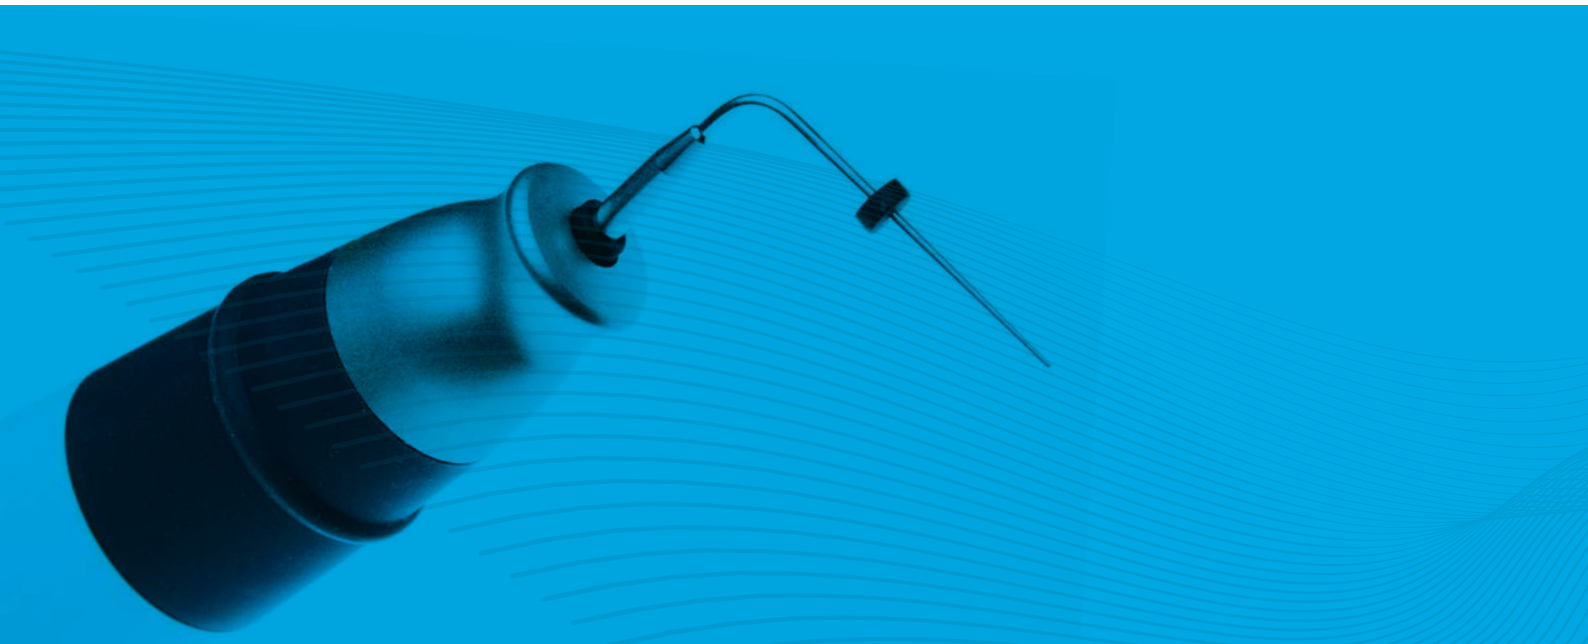


Available in 4-unit blister packs.

zDown®

Vertical condensation
without limits

THE DEFINITIVE OBTURATION



The Z-Down® handpiece, along with the Z-Up®, is part of one of the most **powerful and effective** obturation systems on the market. This ergonomic and lightweight device achieves an **optimal condensation** using a **continuous wave** heat transfer.

Extremely easy to use.
Designed to start and stop at any angle, and features a comfortable and safe grip.

- Temperature range: 90-250 °C
- 5 customizable memory programs. The specialist can choose temperature and time options based on the type of material used for obturation.
- The following interchangeable pluggers are included, for a perfect adaptation to any canal:

Small (black)	40/0.025
Medium (yellow)	50/0.05
Large (blue)	60/0.06

The devices heats and cools quickly for complete **control and safety** throughout the entire treatment.
Only 4-6 mm of the plugger tip heat up to avoid burning soft tissue.

Its lithium battery (2600 mAh) makes it **more efficient** and allows the device to be used even while charging.

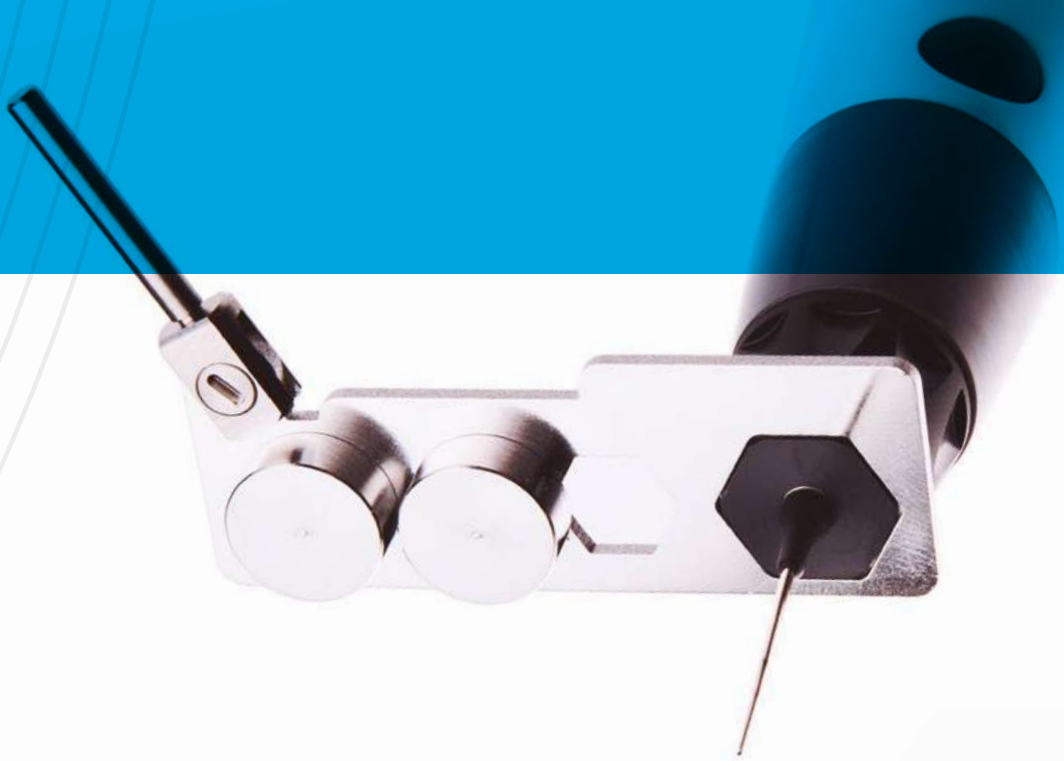
Z-Down® includes:
- Charging base
- Z-Down® handpiece
- Plugger (3 units)
- Adapter

Z-Down® y Z-Up® are available separately or together.

ZUp®

Three-dimensional thermoplastic obturation

THE MOST EFFECTIVE AND COMPLETE SYSTEM ON THE MARKET



Z-Up® is a **three-dimensional thermoplastic obturation** system that, along with Z-Down®, makes up one of the **best systems** for obturation on the market.

It is used to achieve **optimal canal filling**: it maintains the thermoplastic temperature of the gutta-percha allowing for a smooth flow within the root canal for a homogeneous, gap-free filling. It rotates 360°, making for easy filling from any angle.

- Temperature range: 90-250 °C.
- 5 customizable programs based on obturation material selected.
- Allows adjustments to temperature and exclusion speed settings.
- Gutta-percha reserve level indicator.

The tips **can be used several times**, only changing the gutta-percha pellets.

Z-Up® includes two silver tips:

Large	23 G
Small	25 G

It has a highly efficient lithium battery (2600 mAh) and can be used while charging.

Z-Up® includes:
- Charging base
- Z-Up® handpiece
- Cartridge (2 units)
- Silver tips
- Adapter
- Bender for silver tips

Additionally, packs of 2 copper tips can be purchased separately (23 G or 25 G) that can be **easily moulded** with fingers, avoiding having to use the bender. This way it can be used in a way that is even **more comfortable, faster and easier**.

Z-Up® and Z-Down® are available separately or together.

ZPlugger®

For an optimal manual compaction

VERSATILITY AND EFFECTIVENESS GUARANTEED

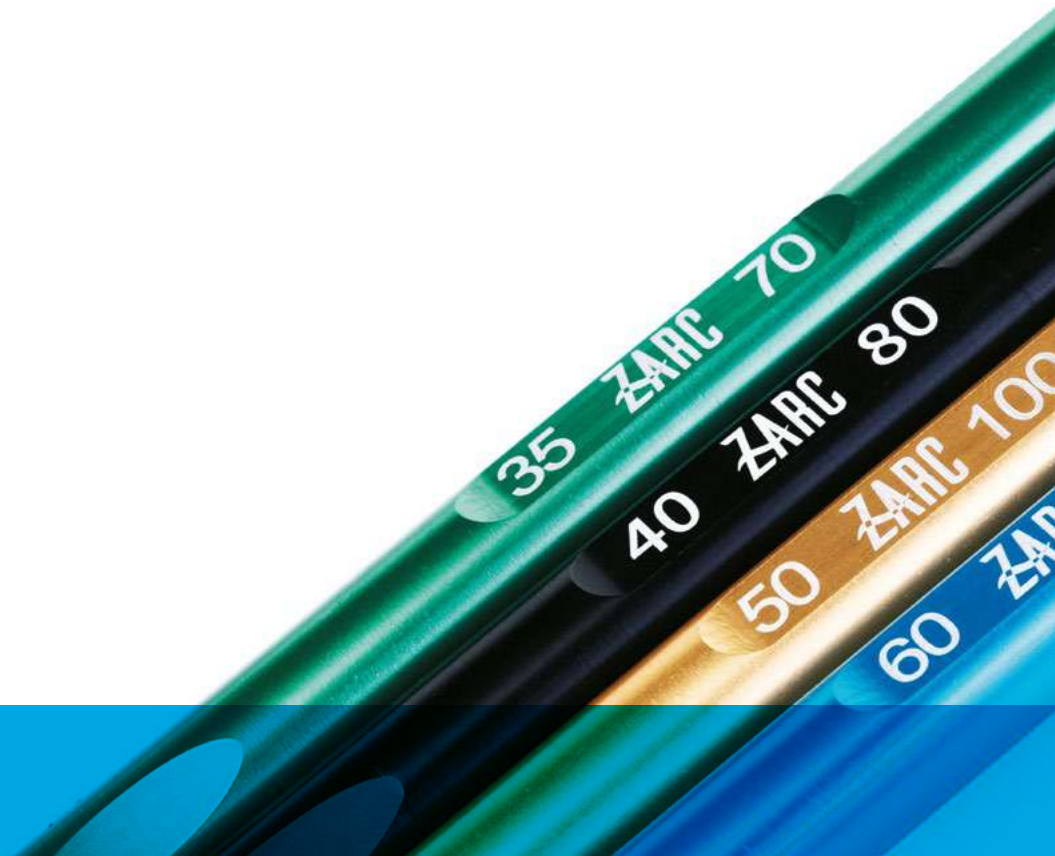
Zarc Z-Plugger® manual pluggers are essential for **proper manual compaction** of gutta-percha.

They have been designed for use in treatments of curved canals and of coronal and middle thirds. The metal handle **facilitates the work** of the specialist for **any type of anatomy**.

It has two different ends:

- The NiTi end has gauges ranging from 35 to 60.
- The stainless-steel end has gauges ranging from 70 to 120.

Available individually in several different sizes:
35/70, 40/80, 50/100 or 60/120.



Paper Points

Guarantee perfect drying

COMFORT AND EFFICIENCY

Zarc paper points are **very compact and absorbent** so that with just a few units the canal system can be dried completely. This is a fundamental step prior to the placement of cement.

Available in the following tapers and sizes: .04/25, .04/30, .06/25 and .06/30.

Accessory Paper Points

ADAPTATION TO ALL TYPES OF CANALS

Zarc accessory paper points are **very absorbent and compact**.

Available in sizes Fine and X-Fine.

Gutta-percha Points

Seamless obturation

ENSURE A PERFECT SEAL

Zarc gutta-percha points **adapt perfectly** for mechanical canal preparation, taking maximum care of the taper and apical diameter.

Specifically manufactured for use in **vertical condensation**, they facilitate three-dimensional sealing of canals so that the continuous wave technique can be done in a **simple and predictable process**.

Available in the following tapers and sizes: .04/25, .04/30, .06/25 and .06/30.

Gutta-percha Accessory Points

Obturation made even easier

ADAPTATION TO ALL TYPES OF CANALS

Zarc gutta-percha accessory points are **really flexible** to make it as easy as possible to place in the canal.
They are perfect for warm or cold gutta-percha obturations.

Available in sizes Fine and X-Fine.

4. BIOCERAMICS

NeoSEALER® Flo

More precision
with less waste.

GUARANTEES BIOACTIVE SEALING

NeoSealer Flo® is an optimized bioceramic sealer for both warm vertical obturation and single cone obturation.

It accelerates the practice by avoiding the need for reapplication, as it does not set or boil during warm obturation. It contains more bioactive cement than other sealers, formed with MTA that promotes hydroxyapatite formation to ensure a bioactive seal. This promotes complete setting and supports healing.

Furthermore, it is resin-free to ensure maximum bioactivity and biocompatibility, it is dimensionally stable, and highly radiopaque thanks to its high tantalum oxide content.

Its Flex FloTM tips offer the following features:

- 81% less waste compared to conventional tips.
- Integrated plug for more precise placement.
- Flexible 25.5 gauge tip to reach smaller canals.

Available in:

- 2.2 g refill syringe (no tips)
- 2.2 g kit (with 20 Flex Flo tips™)
- 20 pack Flex Flo tips™
- 40 pack Flex Flo tips™

NeoPUTTY®

Perfect consistency, no mixing, no waste

OPTIMIZED FOR EFFICIENT HANDLING AND PLACEMENT

NeoPUTTY® is a pre-mixed bioactive repair bioceramic optimized for efficient handling and placement. It has a firm and non-sticky consistency, is wash-resistant, and its bioactivity is based on MTA. This bioceramic does not stain, discolor, or contain resins, and its pH is elevated to promote osteogenic response.

NeoPUTTY® provides excellent performance for dental procedures contacting vital pulp and periradicular tissue:

- Direct and indirect pulp capping
- Partial pulpotomy
- Cavity liner and base
- Pulpotomy and apexogenesis
- Perforation repair
- Resorption
- Obturation
- Apexification
- Root-end filling

NeoPUTTY® has the highest radiopacity in its class and is dimensionally stable. Additionally, it features a waste-free syringe with a positive displacement plunger tip and does not dry out between uses.

Available in:

- 0.5 g Intro Kit (one syringe)
- 1.2 g Refill Kit (one syringe)

NeoMTA® 2

One product for every procedure

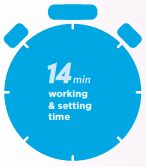
FLEXIBILITY OF USE WITHOUT COMPROMISING PERFORMANCE

The patented NeoMTA 2® gel allows for mixing to obtain a thick putty or a finer sealer, with performance that achieves better results for the patient.

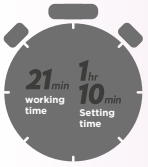
A product for 13 procedures:

- Indirect pulp capping.
- Direct pulp capping.
- Partial pulpotomy.
- Cavity lining.
- Base.
- Pulpotomy.
- Apexogenesis.
- Perforation repair.
- Resorption.
- Sealing.
- Obturation.
- Apexification.
- Root-end filling.

NeoMTA 2® provides flexibility in work without compromising the quality of the outcome. Its working and setting times are more efficient, and the working time can be extended.



When mixed to a putty



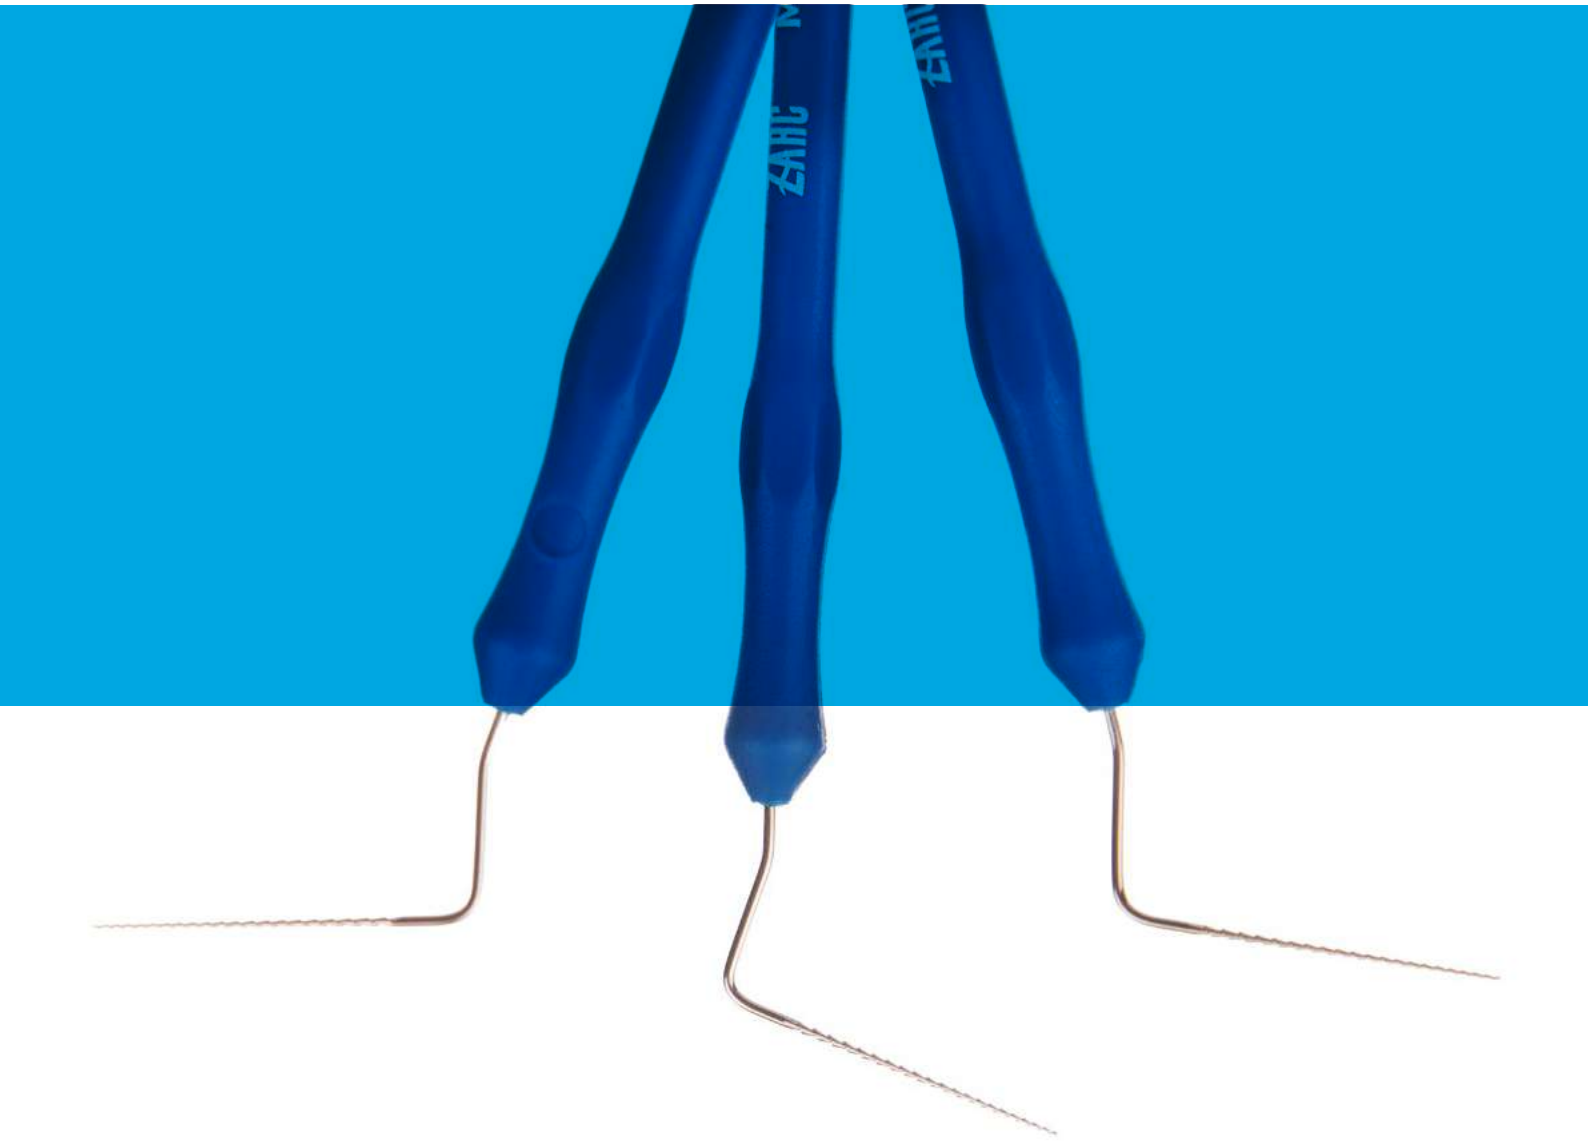
When mixed to a sealer

It has higher radiopacity than its competitors, is dimensionally stable ensuring complete sealing, and does not stain or cause discoloration. Additionally, it has 0% weight loss and is immediately resistant to washing, ensuring the bioactive benefit based on MTA with high pH and without resins.

Available in:

- 0.5 g Kit
- 1 g Kit
- 2.5 g Kit

5. ACCESSORIES



Z-Micro-Shaper®

ESSENTIAL FOR RETREATMENTS

Z-Micro-Shaper®, with its Hedstroem file shape and spiral cutting edges, is a **fundamental instrument** to remove gutta-percha and other obstacles from inside the canal during retreatments.

The active part is slightly distanced so that it can be used with a microscope or magnifying glass.

Available in boxes of 3 units in sizes 20/.02, 25/.02 and 30/.02.

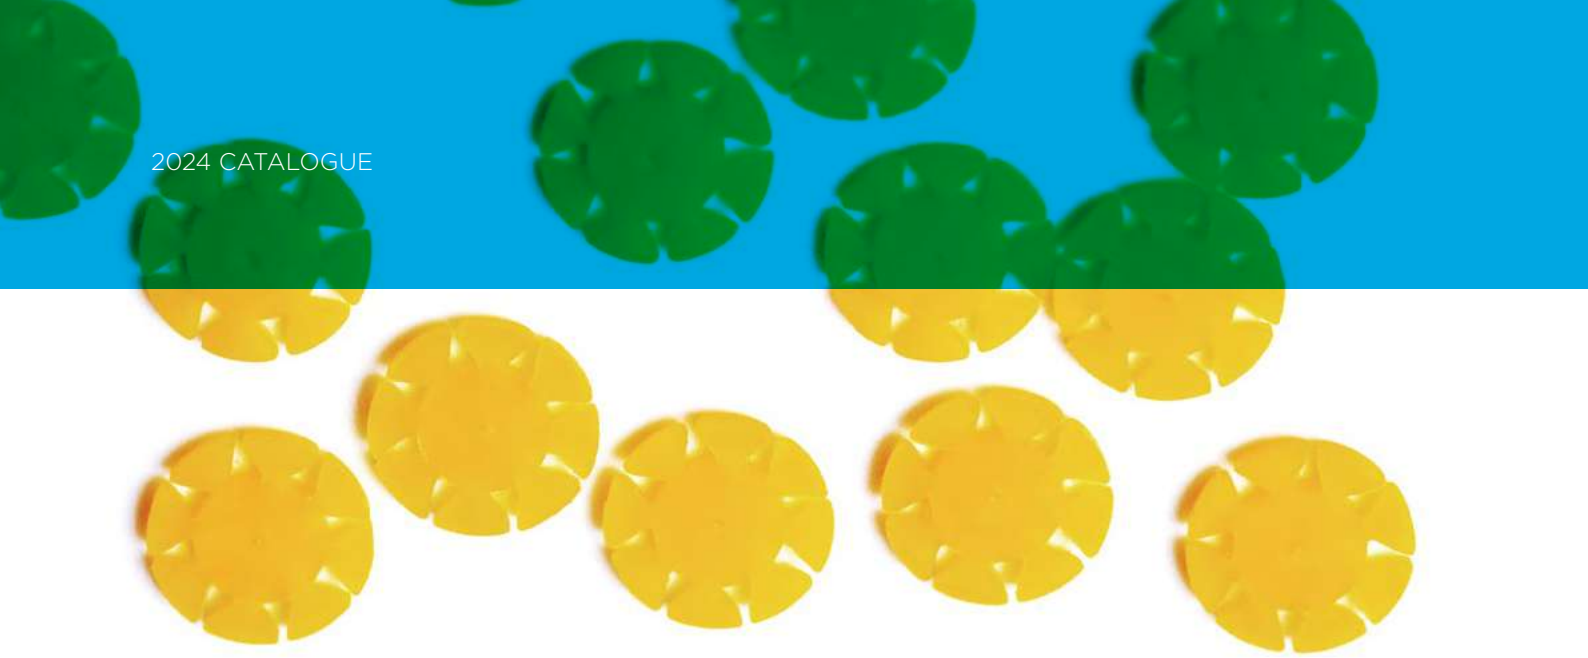
Z-Micro-Opener®

LOCATE AND CLEAN CANALS

Zarc Z-Micro-Opener®, with a K file shape, is the **ideal instrument** to locate canals and to eliminate debris and other obstacles that can be found inside of them.

The active part is distanced from the handle to ensure **direct canal vision** at all times. This allows for the use of magnification during the whole process.

Available in boxes of 3 units in sizes 10/.04, 15/.04 and 20/.04.



Silicone Stoppers with Petals

For optimal control of instrument fatigue

Zarc silicone stoppers with petals allow for an **optimal control of the frequency of use** and fatigue of the files by keeping track of the number of uses or sterilization cycles of manual instruments.

If used for rotary instruments, one to four segments of the wheel get removed after each treatment, and the number of segments remaining indicates the possible subsequent uses.

Additional information:

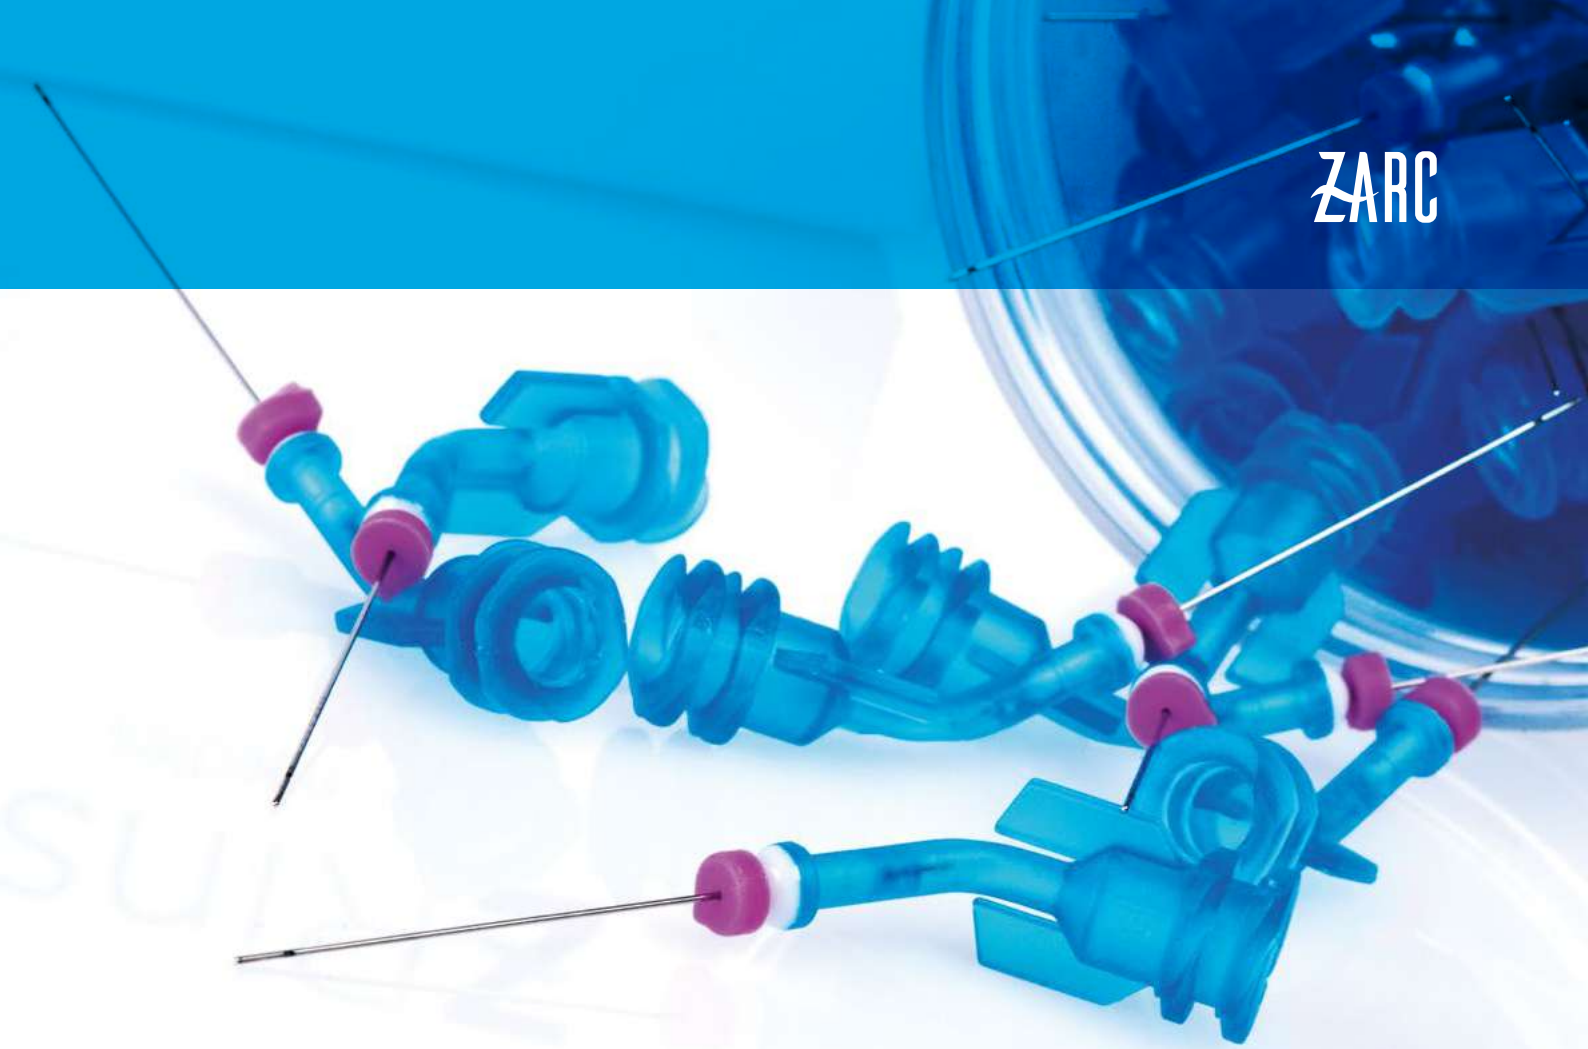
- Autoclavable
- 50 units per bag
- Available in yellow

ZClean®

Sponge Holder

File set cleaning with a neat and practical design.

- Sterilization in autoclave
- Easy instrument identification



ZRinse®

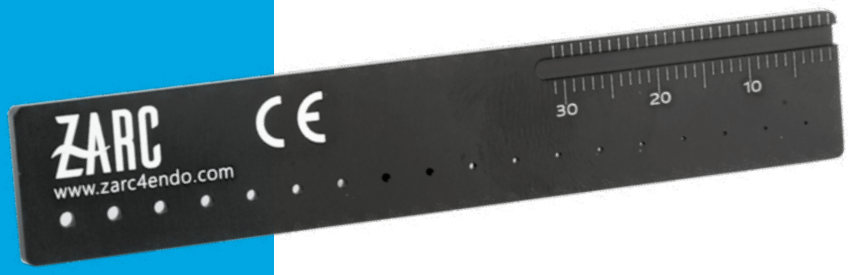
Irrigation needles

- Double-side-vented needles with lateral vents at different lengths at the tip.
- Extraordinarily complete disinfection is achieved during treatment.
- Better visibility thanks to an angled neck.
- Luer-lock connection.
- 30 G Gauge.
- Available in two sizes: 22 and 26 mm.
- Sold in packs of 50 units.

File Organizer

Autoclavable file holder

- A ruler is included to organize instruments during the endodontic treatment.
- Available in yellow, red and blue.



Z-Gauge Ruler

Gutta-percha point gauge ruler

Used to measure gutta-percha points.

For points with gauges from 15 to 140.

ENDO-BLOCK®

Ruler

Used to measure the length of files, gutta-percha and paper points.

This measuring block has precise depth guides to measure the length of instruments used in endodontic treatment thanks to silicone stoppers.

ACADEMY

Zarc se ha asociado con O2O Academy para difundir lo último en **técnicas y productos para la odontología más avanzada, efectiva y moderna**.

El equipo científico-técnico de **Zarc** colabora estrechamente con las principales universidades y centros de formación del país, tanto en niveles formativos de Grado en Odontología como en estudios de posgrado, másteres especializados y cursos específicos.

¡Bienvenidos a la odontología del futuro!

La oferta formativa de **O2O Academy** cuenta con un **extenso programa de cursos propios** en endodoncia. **Zarc** siempre ha entendido la formación con un **marcado carácter práctico**, gracias al cual los alumnos pueden descubrir **de la mano de reconocidos expertos las últimas técnicas y las novedades más vanguardistas**.

La estrecha colaboración con **O2O Academy** es la confirmación de su **compromiso con la universalización de la odontología**, facilitando a profesionales de todo el mundo el acceso a una **práctica segura y sencilla**. La empresa ha nacido para **liderar una auténtica revolución** en el sector dental desde la **innovación y el desarrollo de una cultura colaborativa sólida**.
